# Research ICT Africa!

- Network of researchers conducting ICT policy and regulatory research in 20 African countries across the continent in the absence of data and analysis required for evidence based policy

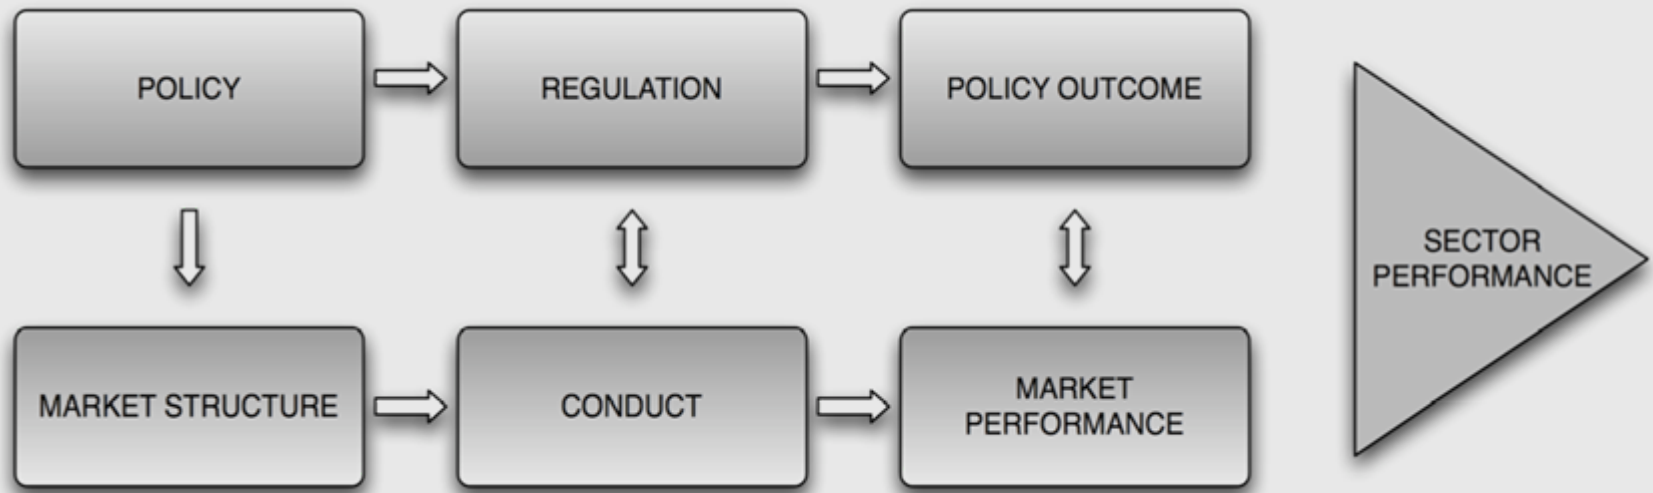

# Towards evidence based policy

- Policy research based on series of supply and demand side research undertaken by the network which is triangulated with a telecommunications regulatory environment perception survey.
- Integrate into an index of indicators that will provide decision-makers with an understanding of policy performance and identify points of intervention

# Sector performance as policy outcomes

# Market structure/Conduct

- Despite horizontal licensing regime, operators remain vertically integrated
- Anticompetitive incentives
- Requires constant adjustment of behaviour by regulator

# Policy/Law

- ECA - no guiding policy
- ICASA Act - Ministerial veto power removed but Council appointment powers
- Extension of state ownership and conflicts of interest
- Ministerial directives
- Altech declarator
- Appeal

# Regulation

- Resources intensive access regulation
- Human capabilities and institutional capacity
- Independence/accountability
- ECA onerous timespans/ interested outcomes
- Delays in critical licensing and regulation

# Market performance/policy outcomes

- Inefficient and expensive
- Asymmetries of information
- High cost of services
- Government choice of winners and losers
- Constraints on innovation

# State ownership

# Telecommunications regulatory environment

Fixed line sector	
Market entry	Ineffective
Access to scarce resources	Ineffective
Interconnection & Facilities	Ineffective
Regulation of anti-competitive practices	Ineffective
Universal service obligations	Ineffective

Mobile sector	
Market entry	Neither effective nor ineffective
Access to scarce resources	Ineffective
Interconnection & Facilities	Ineffective
Regulation of anti-competitive practices	Highly ineffective
Universal service obligations	Neither effective nor ineffective

Vans sector	
Market entry	Ineffective
Access to scarce resources	Ineffective
Interconnection & Facilities	Ineffective
Regulation of anti-competitive practices	Ineffective
Universal service obligations	Ineffective

## Interconnection rates

— Mobile to mobile

### OECD leased lines comparison

## OECD Broadband Subscribers 2007 (thousands)

## Mobile and fixed line traffic (mins)

Fixed Originated (mins)      Mobile Originated (mins)

# Telecommunication Regulatory Environment

**TRE Scores: Average scores across all categories**

See Esselaar Gillwald Stork (2007) Towards an African e-Index: Telecommunications Performance Across 16 African countries.

# Comparative FDI in SA & Nigeria

Telecom investment & GDP per capita

# Institutional design and delivery

- Statutory process and delays
- Licensing - resolution in the courts
- Interconnection - not concluded - Chap 10
- Essential facilities - Hearings March 2008
- Spectrum - revised band plan delayed
- LLU - delayed resume in November

# Households with a working fixed-line - 2007

- Households with working fixed line – **18.2%**

- Urban share of total working fixed lines – **95.7%**

- Average monthly fixed line expenditure – **US\$ 31.31**

- Average monthly price a household without fixed-line is willing to pay for the service – **US\$ 3.05**

# Urban share of residential fixed lines

# Fixed line willingness to pay

How much would you be willing and able to spend monthly on a fixed-line phone for calls and monthly subscription costs? US\$

Line rental only in South Africa \$8

# Supply side - mobile pricing

2006 Low OECD User Basket - cost in US\$ using nominal end of 2006 exchange rates

2006 Low OECD User Basket - cost in US\$ using implied PPP conversion rates

# Mobile phone users

Average monthly WTP for mobile expenditure of non-users that would be interested in getting a mobile phone - R 46.70 (US\$ 4.40)\*

\* At Dec 2007 prices and exchange rates

# Mobile willingness to pay

	Average willingness and ability to pay for a mobile handset in US\$	Average expected cost of a mobile handset in US\$	New users at 20 US\$ for an handset	New users at 15 US\$ for an handset	New users at 10 US\$ for an handset
Benin	7.45	11.44	124,972	487,176	677,715
Botswana	19.14	27.38	119,014	196,496	228,203
Burkina Faso	9	12.84	428,593	1,243,958	1,453,007
Cameroon	15.34	22.16	868,037	1,732,300	1,869,811
Cote d'Ivoire	29.7	30.06	3,057,420	3,539,351	3,914,222
Ethiopia	6.06	64.19	1,436,628	1,637,668	2,644,673
Ghana	14.02	23.15	1,283,271	1,469,652	1,841,831
Kenya	17.12	26.68	2,862,457	4,165,549	5,663,481
Mozambique	4	23.2	56,457	79,895	287,147
Namibia	24.64	25.12	162,992	192,395	232,584
Nigeria	5.65	12.57	356,907	1,004,573	2,527,884
Rwanda	3.69	9.34	Not available	Not available	Not available
Senegal	19.55	25.43	1,336,691	2,169,548	2,301,775
South Africa	19.25	32.41	2,652,827	3,354,797	4,094,783
Tanzania	10.89	17.3	1,422,927	2,102,510	3,272,065
Uganda	5.74	14.98	-	1,499	1,499

Pent up demand in Cote d'Ivoire & Namibia

# Percentage of income on mobile

10 - 17% of income spent on mobile compared to OECD averages of around 5%

# Have you used a public phone in the last three months?

Average monthly public phone expenditure – R 34.82 (US\$ 3.24)\*

\* Exchange rates at Dec 2007

# Internet access, usage and familiarity

# Home computer & connection

Less than 3%  
of households in  
most countries  
have connectivity

# Internet usage

50% know what the internet is, but only 5% use it

## Where do they use it?

# Internet usage and frequency

# Internet awareness & usage

Less than 15% of people access the Internet in even countries with the highest access rates.

# Points of internet access

# Presidential Review

- Policy failure - strategies of state ownership/ protection - privatisation, SNO, infraco
  - Remedy: increased competition but requires more effective regulation
- Regulatory failure: bound my onerous statutory requirements demands/timespans, absence of capacity and disenabling law
  - Remedy: Capacitate regulator, amend law
- Market failure: Fixed, no competition, no access Mobile no effective regulation of effective duopoly, high prices Internet: not adequate backbone investment/pricing
  - Remedy: Enable market entry with service neutral licensing, open access networks.

# Conclusions

- Policy review - market structure - state ownership -broadband
- Review of bottlenecks in ECAct.
- Institutional arrangements - remove conflicts of interest
- Institutional design - reduce number on Council, increase regulatory staff/skills, limit political patronage
- Create conditions conducive to investment through accountable capacitated institutions, certain regulatory environments and flexible policy frameworks
- Remove protectionist strategies, open markets to competition to meet pent up demand, while developing strategies for backbone investment
- Create enabling regulatory environments through removal of barriers to entry, service neutral licensing, cost-based \ (removal of artificial priced asymmetrical termination), prevention of abuse of market dominance
- Open access regime for optimal use of networks and facilities and spectrum to enable entrepreneurship and innovation
- Development of dedicated human capital strategies for sector institutions
- Targeted, competitively implemented universal services strategies rather than scattergun approach

# ...Recommendations

Constrained access and usage of available services	Establish regulatory agencies with the necessary autonomy and resources to regulate effectively within a clear implementation framework.	To build the competency and capacity of the regulator, to enable market efficiency and deal with market failure.	Tendency towards imperfect markets in infrastructure industries, require effective regulation to ensure benefits of competition.
High prices constrain the entry of new consumers into markets and inhibit the usage of those in the market	Remove barriers to entry and establish conditions for fair competition. These include cost-based interconnection and access to facilities of incumbents, prevention of the abuse of market dominance and access to spectrum and numbers; regulate bottleneck facilities;	To allow for the efficient allocation of resources by the market that should result in lower prices and a wider range of services.	Liberalised markets appear to go further in delivering a range of services to consumers than protectionist market strategies
Consumers unaware/confused by artificial licensing categories and	Service -neutral licensing	With the dynamic shifts in technology, the negative impact of policy lags can be overcome with service -neutral licensing that allows operators and service providers to develop organically and seamlessly to offer new services.	Allow for technological progress in converging environment to meet demand without licence constraint and reduce regulatory and licensing burden.
